

Transforming DATA into DECISIONS

WorldDoc is a leading innovator in the healthcare community. They help drive efficiencies that result in higher levels of care and lower costs. These are benefits that are critical for the US healthcare industry and we are excited to be able to play a role in assisting WorldDoc to help consumers become healthier and reduce their healthcare costs.

The BridgeGate® platform enables WorldDoc's proprietary, fully hosted central data driven engine to efficiently integrate disparate data such as; an individual's health risk assessment (HRA), medical and pharmacy claims, laboratory test results and biometric data. Several of the successful BridgeGate projects encompassed detailed collaborations with emphasis in HL7 certification and FirstDataBank integration.

BridgeGate enables healthcare organizations to adopt best practices to improve performance at the patient / facility / organizational level. Through our patented approach, we can provide e-prescribing capabilities, facilitate HIPPA compliance, promote corporate transparency, and improve patient safety and quality of care. BridgeGate offers integration better, faster and more economically than any other solution.

BridgeGate Health *Delivers!*

“The BridgeGate platform enables us to perform data integration with clients in a timelier manner with lower maintenance costs. When there are market opportunities for integration into the WorldDoc platform, we are able to show a proof of concept and deliver features quickly using BridgeGate.”
